

```
process_attribute_default  
< const char * >
```

```
graph BT; A[process_attribute<char*>] --> B[process_attribute<const char*>]; B --> C[process_attribute_default<const char*>];
```

The diagram illustrates the inheritance of process attributes. It consists of three rectangular boxes arranged vertically. The bottom box is white and contains the text 'process_attribute<char*>'. A blue arrow points upwards from this box to a middle box. The middle box is gray and contains the text 'process_attribute<const char*>'. Another blue arrow points upwards from the middle box to the top box. The top box is white and contains the text 'process_attribute_default<const char*>'. This visualizes how the 'process_attribute_default' specialization inherits from the 'process_attribute' template, which in turn inherits from the 'process_attribute' template with the 'char*' specialization.

```
process_attribute<  
const char * >
```

```
process_attribute<  
char * >
```
